Our MVP Vision

High-Impact Flows

Offer 3–5 execution plan customization paths aligned to top goal categories that deliver immediate value to high tier (retreat) audience.

Scalable Logic

Build and refine logic for preliminary manual excution plan creation that can be adapted for digital front end and auto plan creation; logic to be scalable for additional goal categories, modules and disciplines.

Power First Retreats

Leverage structured module content and goal categorization to test product concept at first retreats.

Feedback Loops

Use real data to refine personalization, module tags. Gather user input on goal and module focus areas.

What We're Testing

Five key assumptions guide our MVP development. Validation determines our next moves.

Clients want goals-based, outcome-measurable plans

Clients prefer plans organized around a specific goal and measurable outcomes rather than ongoing habit or subscription models.

Coach-Approved Confidence

Credibility from named expert coaches (fitness, nutrition, leadership, wellness) increases user trust, satisfaction, and willingness to pay.

Multidisciplinary integration creates superior outcomes

Women derive greater perceived and actual results when leadership, fitness, nutrition, and wellness modules are combined into one integrated plan rather than delivered separately.

Pre-Structured Over Open-Ended

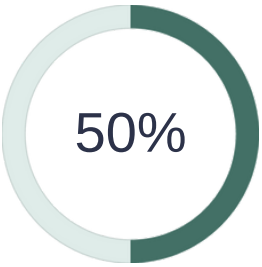
Users prefer pre-structured weekly plans to an open-ended content library that requires constant searching, sorting and decision-making.

Upsell Readiness

Users are open to upsell into retreats, premium plans, or membership tiers when trust is established

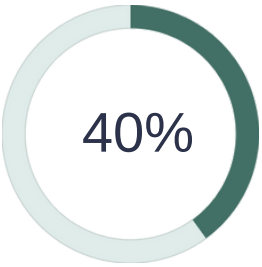
Made with GAMMA

Success Criteria



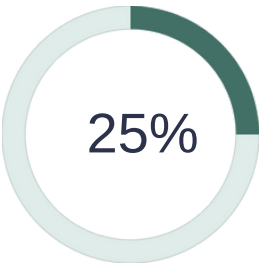
Onboarding Completion

Users complete full onboarding flow



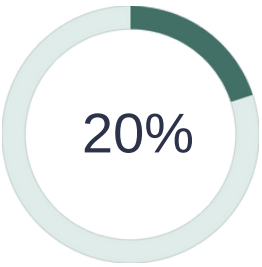
Weekly Module Views

Users view at least 1 module per week



Support Requests

Users request more support or retreat info



Plan Completion

Users complete a full 2-week plan

How We'll Learn

In-App Micro Prompts

"Was this week doable?" / "How did this make you feel?" — quick pulse checks built into the experience

Post-Plan Email Survey

2–3 targeted questions sent after plan completion to capture immediate impressions

Power User Calls

Optional video conversations with 5 power users for deep qualitative insights

Retreat Cross-Reference

Retreat debriefs used to validate digital performance against in-person outcomes

Made with GAMMA

Product Evolution Roadmap: Manual to AI-Powered

The She Commands Execution Plan system is designed for phased evolution, beginning with manual assembly and progressing toward a fully automated, AI-driven personalization engine. Each phase builds strategic capabilities while maintaining plan quality and client experience.

Phase 1: Manual Assembly

Timeline: Now
Questionnaire via form, manual tagging and module selection, manual assembly of plan in Word document format

1

Phase 2: Semi-Automated

Timeline: 6–12 months
Digital intake, Rule-based goal categorization, beta automated module and protocol selection, basic progress tracker with manual reward tracking

2

Phase 3: Fully Digital Ecosystem

Timeline: 12–24 months
Full STP, interactive dashboard, real-time tracking, automated Command Coins, integrated video library, targeted content logic

3

AI Personalization Engine

Natural language processing analyzes goal statements to intelligently categorize intent and match optimal modules. Machine learning continuously improves recommendations based on completion patterns and outcomes data.

Interactive Dashboard

Real-time progress visualization allows clients to track protocol completion, view Command Coin balance, access video tutorials, and receive adaptive coaching guidance throughout their journey.

Adaptive Learning System

Historical performance data informs future plan generation, automatically adjusting intensity levels, protocol selection, and pacing based on individual completion rates and feedback patterns.

Technical Capabilities Expansion

- API for third-party integrations
- Mobile-responsive design for on-the-go access
- App with push notification system for protocol reminders
- Data analytics dashboard for coaches
- Exportable progress reports and certificates

System Architecture: End-to-End Flow

The Execution Plan system transforms client inputs into personalized wellness programs through a sophisticated multi-stage process. Each stage ensures alignment with She Commands' four Power Pillars while respecting individual constraints and preferences.

Client Questionnaire

To inform customized execution plan creation and collect user insights.

Execution Plan Input:

Goal intent (free text & goal category selection); lead time; days,hrs/ week; intensity; limitations/preferences (e.g. menopause)

Additional Insights:

Self-directed or coach guided preference; current fitness, personal development regimen; City/Province/Country; interest in providing feedback

Logic Engine

Goal categorization — NLP-driven

Module selection — based on goal alignment; across all Power Pillars

Protocol matching — based on module alignment; filtered by intensity, availability, limitations

Schedule generation — based on lead time to goal and availability

Coach's tip — NLP driven; derived from preset module level goals

Expected outcomes — derived from preset goal category outcomes

Execution Plan

Personalized plan with Power Pillar overview, goal statement, expected outcomes, selected modules/protocols, time-based schedule, and coaching guidance

Lead Time Logic & Schedule Generation

Schedule generation adapts dynamically based on the client's goal lead time, ensuring realistic pacing and sustainable habit formation. The system prevents mismatched expectations by enforcing duration-appropriate plan structures.

Weekly Plans

Lead Time: ≤ 2 weeks

Structure: 1–2 protocols per pillar

Focus: Rapid, single-session outcomes designed for immediate impact and quick wins

Bi-Weekly Plans

Lead Time: 3–6 weeks

Structure: Progression-based and/or complementary protocols

Focus: Moderate intensity with emphasis on habit formation and sustainable practices

Monthly Plans

Lead Time: ≥ 7 weeks

Structure: Full progressions + complementary add-ons

Focus: Sustainable transformation through integrated, long-term behavior change

Critical Rule: The system does not generate monthly plans for goals with lead time under 3 weeks. This prevents unrealistic expectations and ensures client success through appropriately paced programming.

Time Allocation Logic

- Available days per week determines protocol frequency caps
- Available hours per day filters protocol choices based on duration options
- Intensity preference modulates challenge level selection
- Physical/dietary/emotional limitations exclude incompatible protocols

Schedule Constraints

- Minimum one protocol per Power Pillar maintained across all plan types
- Maximum protocol load scales with available time commitment
- Rest and recovery intervals automatically inserted for high-intensity selections

Made with GAMMA

Module Library Tagging Schema

The tagging schema enables intelligent module selection through comprehensive metadata. Each field includes embedded if-then logic that drives automated decision-making within the plan generation engine.

Field	Description	Example Values	Logic / If-Then Rules
Module ID	Unique identifier for each module	PU0002, PD0002	Cross-reference complementary modules in database
Power Pillar	The pillar this module belongs to	Power Up, Power Through, Power Down, Empower	Ensure at least one module from each Power Pillar is selected
Goal Category	Goal categories this module supports	Decision-Making, Stress & Anxiety, Habit Mastery, Critical Thinking, Mobility	IF goal text maps to category → include matching modules; IF multiple apply → prioritize dominant via keyword frequency
Module Type	Defines module hierarchy and channel limitations (e.g. requires live coach support)	Foundational, Secondary, Assisted, Bespoke (e.g. additional equipment/ resources needed)	IF Primary AND Goal match → select first; IF pillars incomplete → include Secondary; Assisted used only for live events; Bespoke TBD
Complementary Modules	Modules that enhance results if paired	EM0002, PT0002	IF selected module has complementary tags → auto-include them; IF time <3 days/week skip; IF >5 modules already selected → skip
Protocol Sequencing	Which protocols are served up from each module and when	Progression (core; secondary), Complement, Choice	IF Progression and lead time > 2 weeks → bi-weekly progression; IF Progression and ≤ 2 weeks → core only; IF Complement → all protocols; IF Choice →all protocols
Intensity Level	Recommended physical/mental challenge	Low, Moderate, High	IF High → include High protocols; IF Low → include low only; IF Med → excluded High
Time Requirement	Duration of each protocol session	15, 30, 45, 60 minutes	IF available time per day < 30 minutes → exclude protocols over 30 minutes
Protocol Frequency	Recommended weekly frequency	1x–5x per week	IF days/week ≤ 3 → limit to 1 module per pillar
Lead Time Fit	Duration suitability	Short, Medium, Long	IF lead time < 3 weeks → Short; IF 3–6 weeks → Medium; IF ≥ 7 → Long
Coach Tip Theme	Overarching guidance focus	NLP-generated from coach's tips from all selected modules	NLP-generated from coach's tips from all selected modules
Video Available	Whether a video exists	Yes, No	Logic TBD
Reward Eligible	Whether completion earns rewards	Yes, No	IF first plan completed OR first of goal category completed OR 10, 25, 50 of goal category completed→ award Command Coins
Outcome Keywords	Determines which goal categories to select modules from	Eg. Clarity, Confidence, Strength, Calm	IF goal text includes keyword → prioritize module alignment
